

- Becomes the language of the business, *"The way we work"*.

Lean Six Sigma is a combination of two powerful process improvement methodologies, Lean & Six Sigma, which builds upon existing organisational capabilities in quality, statistics, and project execution.

- Expanded knowledge of products and processes through characterisation and optimisation.
- Improved customer satisfaction through improved quality & service.
- Improves communication and teamwork through sharing of ideas, problems, successes, and failures.
- Decrease of defects and cycle times through improved processes.
- Develops common set of tools and techniques with a methodology that can be applied by anyone.
- Processes become Safer, Faster, Better and able to operate at Reduced Costs.

VALUE STREAM MAPPING VSM

A two-day workshop designed to give participants the skills and knowledge to map out value streams and then to use these skills to develop current and future maps of their own processes.

Based upon Lean principles, VSM is a powerful tool to identify opportunities for process improvements within your business. It allows an organisation to identify those constraints preventing processes from flowing at their most optimum.

KAIZEN BLITZ

This one to five-day workshop, (timeframe depends upon the size of the Blitz) gives participants the knowledge on how this teams focused approach gets fast measurable results, decreases resistance to change, and takes advantage of the employee knowledge already in the organisation.

This course is a powerful way to introduce Lean Six Sigma into an organisation using the stealth approach. Improvements made within the workplace become the language of the business, *"The way we work"*.

PROJECT PLANNING SUPPORT

From developing complete project strategies, providing implementation assistance and support or through conducting specific assessments, we are able to provide professional project planning support services to help your business effectively identify and bring a project to conclusion.

We match appropriate strategies to suit your business requirements through the employment of proven project management and Lean Six Sigma methodologies.

Segla International can deliver a project specific solution to ensure your staff have the necessary knowledge and support to succeed in any project.

DESIGN OF EXPERIMENTS DOE

DOE is four-day course designed to assist organisations in improving performance, reducing costs and shortening production development timeframes.

The Program focuses upon the identification and understanding of the relationships between key input factors and the response of a process resulting in improved optimisation and control.
